

JISHNU PR

Senior Backend Developer | Python & Cloud Specialist

Trivandrum, Kerala | +91 97783 69032 | ijishnupr@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Senior Backend Developer with 3+ years of experience designing and shipping production-grade systems across accounting software and health-tech. Deep expertise in FastAPI and Django, with strong command of cloud infrastructure, distributed system design, and API architecture. Led backend development of a full-scale ERP platform, drove measurable performance improvements across every engagement, and consistently made technical decisions — from database schema design to serverless architecture — that reduced operational cost and system complexity. Experienced in collaborative team environments, mentoring junior developers, and taking end-to-end ownership of complex features.

TECHNICAL SKILLS

Languages	Python (expert), Go, JavaScript, SQL
Frameworks	FastAPI, Django, React, Redux Toolkit
Cloud/DevOps	AWS (EC2, S3, Lambda, EventBridge Scheduler), Docker, DigitalOcean, Nginx, Git, CI/CD
Databases	PostgreSQL, Redis, MySQL, Firebase
Architecture	RESTful APIs, JWT / OAuth2, Microservices, RBAC, System Design, Serverless
Integrations	Razorpay, Paysharp, ZPL Printer Integration

PROFESSIONAL EXPERIENCE

Senior Backend Developer * Regal Jewellers | Trivandrum, Kerala (Onsite) *May 2024 - Present*

- Led backend architecture for a custom ERP platform using FastAPI and PostgreSQL, driving key decisions on system design, data modelling, and API structure across sales, inventory, HR, and billing modules.
- Reduced report generation latency by 60% through targeted SQL query optimization, indexing strategies, and execution plan analysis on complex multi-table queries.
- Designed and built secure REST APIs for mobile clients, implementing Role-Based Access Control (RBAC) and JWT authentication to protect sensitive accounting and inventory data.
- Replaced manual billing workflows with automated pipelines using AWS Lambda and EventBridge Scheduler, cutting operational overhead by 40% and eliminating human error in gold transfer calculations.
- Implemented ZPL-based label printing integration, enabling direct barcode and price-tag generation from within the ERP system - removing a previously manual step from daily store operations.
- Mentored team members on backend engineering best practices, led code reviews, and established documentation standards that raised code quality and improved overall team delivery speed.

Full Stack Developer * Shebirth | Remote | Health-Tech *May 2023 - May 2024*

- Owned cloud infrastructure across 4 production applications on DigitalOcean, maintaining 99.9% uptime through Nginx configuration, load management, and proactive server monitoring.

- Improved API response speeds by 35% by refactoring legacy Django codebases and introducing Redis caching for high-frequency health data queries.
- Integrated Razorpay and Paysharp payment gateways, enabling reliable subscription billing for thousands of active users with consistent transactional security.
- Built a reusable React.js component library that reduced frontend development time for new features by 25% and enforced UI consistency across the product suite.

EDUCATION

Master of Computer Applications (MCA)

Indira Gandhi National Open University (IGNOU) | Cochin

2024 - 2026 (Expected)

Bachelor of Computer Science

University Institute of Technology | Thiruvananthapuram

2020 - 2023

KEY ACHIEVEMENTS

- Delivered a full-scale ERP system with a cross-functional team - covering sales, inventory, HR, billing, printer integration, and mobile APIs - running live in an active jewellery retail business.
- Quantifiable impact in every role: 60% faster reporting, 40% lower billing overhead, 35% faster APIs, and 99.9% uptime across 4 production applications.
- Advanced AWS usage beyond basic hosting - serverless compute with Lambda and event-driven scheduling with EventBridge to decouple and automate business-critical workflows.
- Proven range across B2C product engineering (Shebirth) and enterprise accounting software (Regal Jewellers), delivering end-to-end in both contexts.
- Pursuing MCA alongside full-time engineering work - deepening computer science fundamentals while shipping production code every day.
